

AMIT SAROJ

Senior Full Stack Engineer | MERN STACK | Node.js | React | TypeScript

Chandigarh, India | +91 8707831236 | saroj Amit4956@gmail.com | linkedin.com/in/amit-saroj | github.com/amitsaroj | <https://portfolio.autopilots.monster/>

SUMMARY

Senior Full Stack Engineer with 5+ years of experience building scalable Node.js/TypeScript applications, microservices, and event-driven systems across fintech, RWA tokenization, e-commerce, healthcare, and SaaS. Hands-on with NestJS, React, Next.js, Kafka, Redis, MongoDB, PostgreSQL, Docker, AWS, automated testing, and production observability. Experienced in secure API design, high-throughput systems R&D, blockchain integrations, and mentoring junior engineers.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML, CSS

Frontend: React.js, Next.js, Redux Toolkit, Redux, responsive UI, reusable component architecture

Backend: Node.js, NestJS, Express.js, Fastify, REST APIs, GraphQL, Microservices, Distributed Systems, Event-Driven Architecture, WebSockets, Socket.IO

Data & Messaging: MongoDB, PostgreSQL, MySQL, Redis, Apache Kafka, Aeron

Testing: Jest, Unit Testing, Integration Testing, E2E Testing, Mocks

Cloud & DevOps: AWS EC2, S3, EKS, CloudWatch, API Gateway, Docker, Docker Compose, Jenkins, GitHub Actions, CI/CD

Observability: Grafana, Sentry, Winston

Web3: Web3.js, Ethers.js, EVM, Wallet & Smart Contract Integration, RWA Tokenization, MultiSig, Cross-Chain Transactions

AI & Automation: AI Agents, RAG, OpenAI, LangChain, Qdrant, n8n, Workflow Automation

Developer Tools: VS Code, Claude Code, Cursor, Codex, GitHub Copilot

Practices: System Design, API Design, RBAC, Authentication/Authorization, Rate Limiting, Performance Optimization, Multi-Tenant SaaS, Agile/Scrum

PROFESSIONAL EXPERIENCE

Antier Solutions - Software Engineer (Full Stack) | Feb 2023 - Present

Mohali, India

- Architected and developed Node.js, NestJS, and Fastify services across approximately 9 microservices for an enterprise investment platform supporting 10K+ users/investors/issuers, including onboarding, KYC/AML, RWA tokenization, asset workflows, and transaction processing.
- Designed secure REST APIs with JWT, RBAC, Redis caching, rate limiting, and MongoDB/PostgreSQL persistence across admin, issuer, and investor modules; handled production incidents involving API timeouts, failed transactions, and data synchronization issues.
- Built Kafka-based asynchronous workflows for EVM blockchain indexing and background processing, adding retry and replay mechanisms to move bottleneck-prone workloads away from synchronous request paths.
- Integrated Web3.js/Ethers.js wallet and transaction flows for token swaps and cross-chain bridging, including robust handling of pending and failed transaction states in React.js/Next.js applications.
- Refactored React.js/Next.js component architecture and Redux state management across investment and token-swap platforms, reducing unnecessary re-renders and improving frontend scalability.
- Built Next.js application flows using server-side rendering (SSR), static site generation (SSG), API routes, middleware, and server components to support scalable, SEO-friendly, and secure frontend experiences.
- Used Grafana, Sentry, Winston, AWS CloudWatch, Docker, EKS, EC2, S3, and API Gateway for deployment, monitoring, debugging, and production operations; contributed to CI/CD pipelines with Jenkins and GitHub Actions.
- Mentored 5+ junior developers as an individual contributor by assigning tasks, reviewing pull requests, conducting technical discussions, and supporting feature delivery and production debugging.
- Built and maintained Jest-based unit, integration, and E2E test suites with mocks, achieving approximately 70% code coverage on relevant services.
- Researched, designed, and built the complete Order Management Service (OMS) in Rust using Aeron for high-throughput exchange workloads.
- Benchmarked the OMS at approximately 2 million order requests per second, validating the architecture under extreme throughput conditions.

Arivani Technologies Pvt. Ltd. - Software Engineer (MERN Stack) | Jan 2021 - Feb 2023

Lucknow, India

- Delivered full-stack features across enterprise client applications using React.js, Redux/Redux Toolkit, Node.js, Express.js, TypeScript, MongoDB, and MySQL, owning API integration, debugging, and production-ready feature delivery.
- Developed responsive frontend interfaces with React.js and Redux state management; built reusable UI components and optimized rendering and application performance for a smoother user experience.
- Built e-commerce storefront and checkout capabilities including product collections, featured products, new arrivals, bestseller sections, product discovery, search/filtering, and Square payment integrations supporting Cash App, Apple Pay, Google Pay, and major credit cards.
- Developed a healthcare marketplace with doctor listings, appointment booking, coupon-based service purchasing, and real-time doctor-patient chat using React, Redux, Node.js, Express.js, Socket.IO, and MongoDB.
- Delivered a PropTech ownership and investment-intelligence platform with assessment/reporting modules and backend performance improvements using MongoDB query optimization and Redis caching.
- Integrated frontend and backend APIs across multiple client projects using MongoDB, Express.js, React.js, Node.js, TypeScript, and MySQL, collaborating in Agile/Scrum teams through code reviews and feature delivery.

Softpro India Computer Technologies - Full Stack Developer (Internship) | Jul 2019 - Dec 2019

Lucknow, India

- Received hands-on training in full-stack web development using the MERN Stack (MongoDB, Express.js, React.js, and Node.js), building web applications under senior developer mentorship.
- Built responsive web pages using HTML5, CSS3, JavaScript (ES6), and Bootstrap while learning modern frontend development best practices.
- Converted Figma/UI designs into responsive React.js user interfaces, focusing on reusable components, cross-browser compatibility, and mobile-first design.
- Developed REST APIs, CRUD modules, and integrated frontend applications with backend services using Node.js and Express.js.
- Gained practical experience with Git, debugging, API integration, and collaborative software development workflows while strengthening core JavaScript and full-stack engineering fundamentals.

PERSONAL PROJECT

Autopilot Monster CRM - AI-Native Multi-Tenant SaaS | Jan 2026 - Present

Live production personal project

- Built a production multi-tenant SaaS platform combining CRM, AI voice agents, WhatsApp automation, workflow automation, RAG-powered knowledge retrieval, and lead qualification.
- Implemented RAG workflows with chunking, embeddings, Qdrant vector search, reranking, and tenant-level data isolation.
- Implemented JWT with MFA, RBAC, audit logging, and event-driven background processing to support secure multi-tenant operations.
- Built a GitHub Actions CI/CD pipeline for the backend, automating build, test, and deployment workflows to AWS infrastructure for repeatable production releases.
- Configured the frontend deployment workflow on Vercel, including production environment setup and automated deployments from the source repository.

EDUCATION

Diploma in Computer Science & Engineering - Board of Technical Education, Uttar Pradesh | 2016 - 2019
